ISSN 0 030-4018

OPTICS COMMUNICATIONS

A journal devoted to the rapid publication of short contributions in the field of optics and interaction of light with matter

MASTER INDEX
VOLUMES 21–30

JULY 1980

SEP 11 10 40 AM '81
UNIVERSITY OF HAWAII
LIBRARY

NORTH-HOLLAND PUBLISHING COMPANY–AMSTERDAM

EDITOR:

F. ABELÈS
Laboratoire d'Optique des Solides
Université de Paris VI,
4 place Jussieu,
75230 – Paris Cédex 05, France

ASSOCIATE EDITORIAL BOARD:

G. MAYER, Paris, France

Optics Communications is published monthly. The subscription price per volume is Dfl. 160.00 (approx. $82.00); postage Dfl. 16.00 (approx. $8.25).

Subscriptions should be sent to the publisher, North-Holland Publishing Company, P.O. Box 211, Amsterdam, The Netherlands, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Set Price: US $121.75/Dfl. 280.00 Set ISBN 0-7204-0698-6

The program of the XXVIIth Session of the Les Houches Summer School reflected the dramatic impact of the development of lasers in modern spectroscopy. Traditional spectroscopic methods are now being replaced or complemented by new linear and nonlinear laser techniques which take advantage of the various remarkable properties of laser light.

These books give a general presentation of the theoretical background necessary for the understanding of light-matter interactions problems, and review the various new methods in which lasers are now being used to improve our knowledge of atoms, molecules and even nuclei. The ten courses are grouped into five parts dealing first with fundamental problems of light-matter interactions, and proceeding to specific applications to spectroscopy.

As with the previous Les Houches Proceedings volumes, the treatment is pedagogical and extensive references are included. The work will be of considerable value to a wide range of physicists interested in light-matter interaction problems.

CONTENTS. VOL. 1 - **Part I. Interaction of Atoms with Strong Electromagnetic Fields.** Course 1. Atoms in strong resonant fields **(C. Cohen-Tannoudji).** Seminar 1. Resonance interactions between radiation and atoms: perturbation of the "final state" **(G. W. Series).** Seminar 2. Frequency distribution of the fluorescent light induced by monochromatic radiation **(H. Walther). Part II. Laser Theory and Saturation Effect.** Course 2. Laser theory **(M. Sargent III).** Course 3. Steady-state and transient behavior of two- and three-level systems **(M. S. Feld).** Seminar 3. Doppler-free laser spectroscopy **(B. Cagnac, S. Haroche and S. Liberman).** Seminar 4. Verification of optically dressed atoms **(P. E. Toschek). Part III. Transient Effects.** Course 4. Coherent optical spectroscopy **(R. G. Brewer).** Course 5. Time-resolved spectroscopy **(S. Stenholm).** Seminar 5. Time-resolved near-resonance photon scattering from collisionally perturbed molecules **(S. Mukamel).** *VOL. 2* - **Part IV. Molecular Spectroscopy.** Course 6. Probing small molecules with lasers **(J. -C. Lehmann).** Course 7. Infrared and radiofrequency spectroscopy in the laser cavity **(T. Oka).** Course 8. Applications of infrared lasers to spectroscopy **(P. L. Kelley).** Course 9. Some molecular studies using lasers **(A. Javan).** Seminar 6. Wavelength comparison between lasers **(J. -P. Monchalin). Part V. New Applications and Advances in the Laser Field.** Course 10. "Crossing" of lasers and nuclear spectroscopy **(V. S. Letokhov).** Course 11. Principle of laser isotope separation **(V. S. Letokhov).**

"Volume 4 of the collected works of Niels Bohr (a fundamental contribution to the History of Science in the XXth century...) contains the papers, lectures and correspondence of the 1920-1923 period and the Encyclopaedia Britanica article of 1926, all concerned with the problem of atomic structure and the periodic table. It is a fascinating set of documents which describe the various attempts to achieve a consistent picture of the electronic constitution of the elements... The collected works of Niels Bohr are a superb document, a tribute to an intellectual giant." **Physics Bulletin**

Volume 3:

The Correspondence Principle (1918-1923)

edited by J. RUD NIELSEN

1976 xii + 702 pages
Price: US $122.25/Dfl. 275.00
Subscription Price:
US $104.50/Dfl. 235.00
ISBN 0-7204-1803-8

"Three things stand out in this book: (i) the high degree of sophistication attained by applications of the 'old' quantum theory, particularly in the phase concerned here; (ii) the magnitude of the applications for which Bohr himself was responsible, and the effort he expended upon them, almost to the point of exhaustion; (iii) the extent to which the gentle and sensitive young man who looks at us from the frontspiece was the oracle for all the leading physicists of his time. His Collected Works will stand as one of the very greatest documents in the history of science and of human thought."

Physics Bulletin

CONTENTS: Part I. The Correspondence Principle. Part II. Selected Correspondence (1917-1923).

Volume 2:

Work on Atomic Physics (1912-1917)

edited by ULRICH HOYER

1978 xii + 636 pages
Price: US $122.25/Dfl. 275.00
Subscription Price:
US $104.50/Dfl. 235.00
ISBN 0-7204-1802-X

This volume deals with the years 1912-1917 when Bohr was at his most creative, conceiving revolutionary new ideas on absorption phenomena and on atomic and molecular physics. The published papers, extensive manuscript material and the correspondence from this period give some idea of the intensity of Bohr's concentration and the rigor of logic which led him to his conclusions. They also document the amazing amount of painstaking work he conducted single-handedly to consolidate the foundations of his theory and determine its consequences.

CONTENTS: Part I. Absorption of Charged Particles. II. Constitution of Atoms and Molecules. III. Consolidation of the Quantum Theory of the Atom. IV. Selected Correspondence (1912-1917).

Volume 1:

Early Work (1905-1911)

edited by J. RUD NIELSEN

1972 xlviii + 608 pages
Price: US $100.00/Dfl. 225.00
Subscription Price:
US $84.50/Dfl. 190.00
ISBN 0-7204-1801-1

"... these volumes will surely be well used. The aim is to add to a complete reissue of the published papers a critical (but full) selection of additional documents. The volumes are grouped in subjects, although this is in fact much the same as a chronological arrangement... The book is an essential reference for all students of the history of quantum mechanics."

REVISED, UPDATED AND EXPANDED VERSION

Diffraction and Imaging Techniques in Materials Science

Volume I: Electron Microscopy

Volume II: Imaging and Diffraction Techniques

edited by **S. AMELINCKX,** *University of Antwerp and S.C.K. - C.E.N. Mol, Belgium,* **R. GEVERS,** *University of Antwerp, and* **J. VAN LANDUYT,** *University of Antwerp.*

1978 860 pages in 2 volumes

Price: Volume I: US $54.50/Dfl. 125.00
Volume II: US $54.50/Dfl. 125.00
2-Volume Set: US $98.00/Dfl. 225.00

ISBN: Volume I: 0-444-85128-3
Volume II: 0-444-85129-1
2-Volume Set: 0-444-85130-5

The enthusiastic response to the original 1970 work has led to the publication of this revised edition. The editors have added many new, up-to-date articles, thereby greatly expanding the scope of this book.

Recent years have witnessed the development of diffraction and imaging techniques into indispensable tools for the study of structural and topographical properties of materials. This distinguished work provides a survey of the different techniques and theories required for a detailed interpretation of the experimental results. The information obtained from these various techniques leads to a more detailed understanding of the problems, while the points of correspondence between the underlying theories in turn provide a better understanding of the methods themselves.

This extremely readable collection of articles provides stimulating material for both scientists and graduate and postgraduate students, and is particularly appropriate for courses in electron microscopy, electron diffraction and x-ray topography.

CONTENTS: **Part I.** General review of the experimental methods for the determination of atomic clusters *(A. Guinier).* Kinematical theory of electron diffraction *(R. Gevers).* Dynamical theory of electron diffraction *(M.J. Whelan).* The study of planar interfaces by means of electron microscopy *(S. Amelinckx and J. van Landuyt).* The weak-beam method of electron microscopy *(D.J.H. Cockayne).* Indentification of small defect-clusters in particle-irradiated crystals by means of transmission electron microscopy *(M. Wilkens).* Some applications of transmission electron microscopy to phase transitions *(G. Thomas).* Martensitic transformations: Electron microscopy and diffraction studies *(C.M. Wayman).* Computed electron micrographs and their use in defect indentification *(P. Humble).* Direct structure imaging in electron microscopy *(D. van Dyck).* Kikuchi electron diffraction and applications *(G. Thomas).* Study of substitution order-disorder by means of X-ray and electron diffraction *(R. de Ridder).*
Part II. The theory of high energy electron diffraction *(A. Howie).* Recent progress in high voltage electron microscopy *(V.E. Cosslett).* Surface characterization by low energy electron diffraction *(P.J. Estrup).* Advances in X-ray and neutron diffraction techniques *(A. Guinier).* Techniques and interpretation in X-ray topography *(A.R. Lang).* Contrast of images in X-ray topography *(A. Authier).* Mirror electron microscopy theory and applications *(A.B. Bok).* Surface studies by field emission *(E.W. Müller).* Developments in field ion microscopy *(E.W. Müller).* Subject index.

ATOMIC ENERGY- LEVEL AND GROTRIAN DIAGRAMS

by **STANLEY BASHKIN and JOHN O. STONER JR.,** Department of Physics, University of Arizona, Tucson, Arizona, U.S.A.

This indispensable reference series is the first work since that by Grotrian himself to provide such a detailed compilation of present information. The arrangement permits the user to see at a glance the entire set of energy-levels and the transitions between levels

The series will be invaluable to all scientists and teachers of science who are concerned with atoms and monatomic ions. As it is possible to see not only what is known about such systems, but also what remains to be found, research workers too will find the books useful guides to problems in atomic structure.

NEW

Volume 2

Sulfur I - Titanium XXII

1978 600 pages Price: US $80.00/Dfl. 180.00
Subscription Price: US $66.75/Dfl. 150.00
ISBN 0-444-85149-6

This volume continues the pictorial representation of energy levels and electronic transitions for atoms and ions in a style similar to that of Volume I. Two types of drawings have been prepared: one that shows the energy-levels in order of increasing excitation energy, and one that shows the transitions between levels.

A Grotrian diagram may include all the observed transitions for a particular ion, or it may contain only the observed transitions within a given multiplicity, from one multiplicity to another, or among other subsets of the energy-levels. In all cases, however, information has been presented in a clear, useful manner.

The present volume includes all monatomic species from Sulfur I through Titanium XXII. The data are the most complete to be found in a single volume, and the main contents of each reference are briefly described.

A new notation is provided for cases involving 3d electrons. For those ions, too, the theoretical calculations on parentage from different configurations are summarized or cited.

Subscription Information

Subscribers to the series ATOMIC ENERGY-LEVELS AND GROTRIAN DIAGRAMS are entitled to a 15% discount on the list price per volume.

Volume 1

Hydrogen I - Phosphorus XV

1975 xix + 615 pages
Price: US $80.00/Dfl. 180.00
Subscription Price: US $66.75/Dfl. 150.00
ISBN 0-7204-0322-7

"This volume is probably the most detailed and elaborate compendium of Grotrian diagrams available at present. For years the demand for such diagrams has increased, inspired largely by the wealth of ultraviolet solar spectra now available for interpretation by the astrophysicist. These authors have initiated a large program in answer to this need...

For each element a short bibliography is included, giving the source material used for each spectrum. Six general references cover most of the data. The excellent Table of Contents is invaluable."

Journal of the Optical Society of America

Volume 1 Addenda

1978 viii + 178 pages
Price: US $22.25/Dfl. 50.00
Subscription Price: US $17.75/Dfl. 40.00
ISBN 0-444-85236-0

In extending and correcting the information presented in Volume I, the editors have in several cases constructed new diagrams in light of the extensive revisions to spectroscopic data that became available between Volume I's publication and June, 1976. In other cases they have provided brief lists of transitions and/or levels that the reader may add to Volume I, as well as references to sources of such information.

Instructions to authors

Contributions should be sent in *triplicate* to the editor. Contributors are reminded that, once their contribution has been accepted for publication, *all further correspondence should not be sent to the editor, but directly to the publisher. (Editorial Department, North-Holland Publishing Company, P.O. Box 103, Amsterdam, The Netherlands).* Manuscripts should be written in English, French or German. Each manuscript should contain an abstract in English. Manuscripts should be typewritten originals (plus two copies) with a wide margin and ample space between the lines. Contributions are strictly limited to 6 printed pages. As all proofreading will be done by the publishers' staff and no proofs will be sent to the author, the presentation of the manuscript should be very clear. Special care should be taken of those symbols which might easily cause confusion (e.g. o, 0, O; κ, k, K; X, x, $\times$, χ; z, Z; $\propto$, α; φ, ϕ, $\emptyset$; t, τ, T, Γ; $\langle$, $<$, $\rangle$, $>$; w, ω; p, ρ, etc). All Greek letters and unusual symbols should be identified in the margin the first time they occur in the text. No manuscripts will be returned unless by special request of the author. All references must be numbered, put at the end of the paper, and should contain the names and initials of all authors. References should not contain footnotes. Figures should be sharp glossy prints of about manuscript size, or, preferably, original drawings. They should be lettered by using a lettering guide (stencil) or stripletter (e.g., letraset) in such a way that they can be reduced to one-column width (7½ cm). All figures should have captions.

For purposes of compiling a subject index authors are requested to index their manuscripts according to the following classification list:

1. *Propagation and transmission in homogeneous media* (interference, diffraction, coherence, polarization, geometrical optics, optical measurement techniques).
2. *Propagation and transmission in inhomogeneous media* (coherence in random turbulent media, scintillation, scattering from haze, fog, dust, etc., atmospheric optics).
3. *Optical information, image formation and analysis* (Fourier transform optics, modulation and optical transfer functions, optical storage and retrieval, holography, pattern recognition, image processing and restoration, speckle).
4. *Optical communications* (optical waveguides, fiber optics).
5. *Atomic and molecular physics* (atomic and molecular spectra and interactions with photons, atomic and molecular collision processes and interactions, use of optical techniques for determining other properties).
6. *Condensed matter* (spectroscopy, optical properties of materials, use of optical techniques for determining other properties).
7. *Plasmas.*
8. *Lasers* (including laser beam interactions and applications).
9. *Nonlinear optics* (stimulated Raman, photon echoes, parametric oscillations and other interactions of radiation with matter, harmonic generation, beam trapping, self-induced transparency and related effects).

In the absence of such indications by the author, the classification will be done by the Editor.

North-Holland ANNOUNCES:

PHYSICA D: Nonlinear Phenomena

Editors:

H. Flaschka
University of Arizona, Department of Mathematics, Tucson, Arizona 85721

J. Ford
Georgia Institute of Technology, School of Physics, Atlanta, Georgia 30332

A.C. Newell
Clarkson College of Technology, Department of Mathematics and Computer Science, Potsdam, New York, 13676

A. Scott
University of Wisconsin, Department of Electrical and Computer Engineering, Madison, Wisconsin 53706

Aims and Scope:

- *This new section of Physica is designed with the aim of providing a common forum for scientists interested in exploring the role of nonlinearity in natural phenomena. It will contain:*
- *Communications of original research, conforming to the general standards described below.*
- *Invited or contributed surveys accessible to readers with diverse backgrounds.*
- *Announcements and summaries of meetings, recommendations of books or review papers, etc.*

In order to give some focus to the first few issues, the editors intend to stress certain areas in which the importance of nonlinearity is particularly apparent: numerical analysis and applied mathematics, hydrodynamics, plasma physics, statistical physics, solid state physics, celestial mechanics, quantum field theory, biological or chemical reaction-diffusion systems. The principal aim is to publish reports of experiments, techniques, and ideas which — although they may be derived and explained in the context of a particular field — advance the understanding of nonlinear phenomena in general.

Advisory Board:

D.J. Benney *(U.S.A.)*, A. Bers *(U.S.A.)*, F. Calogero *(Italy)*, C. Conley *(U.S.A.)*, P. Fife *(U.S.A.)*, P. Goddard *(England)*, H. Haken *(Germany)*, M. Hénon *(France)*, A. Jackson *(U.S.A.)*, A.N. Kaufman *(U.S.A.)*, J. Krumhansl *(U.S.A.)*, M. Kruskal *(U.S.A.)*, J. Lebowitz *(U.S.A.)*, J. Nagumo *(Japan)*, S. Rice *(U.S.A.)*, M. Sato *(Japan)*, L. Segel *(Israel)*, Y. Sinai *(U.S.S.R.)*, G. Strang *(U.S.A.)*, R. Temam *(France)*, M. Toda *(Japan)*, C. Tracy *(U.S.A.)*, S. Trullinger *(U.S.A.)*, N.J. Zabusky *(U.S.A.)*, V.E. Zakharov *(U.S.S.R.)*

Contents First Issue:

Solitons in Condensed Matter: A Paradigm *(A.R. Bishop, J.A. Krumhansl, S.E. Trullinger)*
The Inverse Scattering Solution for the Full Three Dimensional Three-Wave Resonant Interaction *(D.J. Kaup)*
Evidence that Random Behaviour is Generic for Nonlinear Differential Equations *(S.A. Orszag, J.B. McLaughlin)*
Density Matrix of Inpenetrable Bose Gas and the Fifth Painlevé Transcendent *(M.Jimbo, T. Miwa, Y. Môri, M. Sato)*
Degenerative Dispersion Laws, Motion Invariants and Kinetic Equations *(V.E. Zakharov, E.I. Schulman)*

The Second Soliton Workshop - Jadwisin 1979: a short summary by A. Sym

Forthcoming Articles:

Instantons and Magnetic Monopoles in Yang-Mills Gauge Theories *(M.K. Prasad)*
Nearly Linear Mappings and their Applications *F. M. Israelev)*
Classical Hamiltonian Perturbation Theory Without Secular Terms or Small Denominators *(H. Abarbanel)*
Symbolic Dynamics and Relaxation Oscillations *(J. Guckenheimer)*
Different Ways to Turbulence in Dissipative Dynamical Systems *(P. Manneville, Y. Pomeau)*
Fluid Dynamical Form of the Linear and Nonlinear Schrödinger Equations *(E.A. Spiegel)*

Starting in the second issue a new section: Nonlinear Science Abstracts

Call for papers:

In accordance with the goals of the Journal, both research papers and survey papers are invited.
All contributions should be sent to any one of the four editors. A research paper should deal with an aspect of nonlinearity of potential relevance to diverse areas. Use of specialized language should be minimized so that readers can evaluate the applicability of the idea to other fields. Survey papers dealing with the role of nonlinearity in problems of general scientific interest or with techniques of value in different fields are particularly welcome. A honorarium is provided for each survey article upon acceptance. A prospective author of a survey article should first contact the editors with a proposal.

Subscription Information:

1980: Volume 1 (1 volume in 4 issues)
Subscription price for 1980: US $98.00/Dfl. 191.00 including postage and handling.

Combined Subscription price for 1980:
Physica A (Vols. 100-104), B + C (Vols. 100 and 101), and D: US $660.50/Dfl.1288.00 including postage and handling.

Free specimen copies are available upon request.
